# Radial Insert Ball Bearings and Housing Units

Black Series

**FAG**

# Foreword

## **FAG Black Series**

The new radial insert ball bearing and housing units FAG Black Series from Schaeffler give easy mounting, smooth running and high reliability and thus allow particularly economical bearing arrangements.

The dimensions of the FAG housings, made from flake graphite cast iron and with a primer paint coating, conform to JIS B 1559. These single piece cast housings can support moderate to high radial and axial loads. The radial insert ball bearings have basic protection against corrosion due to the Durotect BS coating.

The bearing units are particularly suitable for applications with moderate to high loads.

Typical areas of application are:

- agricultural, construction and mining machinery
- power transmission and conveying equipment
- pumps
- textile, paper and woodworking machinery
- machines for the food container filling, wood and packaging industry
- steel industry.

## **Radial insert ball bearings**

FAG radial insert ball bearings with a spherical outer ring are based on single row deep groove ball bearings 62 and are designed in accordance with JIS B 1558. The outer and inner rings as well as the flinger shields of the radial insert ball bearings are provided with the Durotect BS coating in order to offer basic protection against corrosion. The Black Series radial insert ball bearings are available with two location methods and one type of seal. They can be relubricated and are particularly easy to install.

## **Housing units with flake graphite cast iron housings**

Housing units in accordance with JIS B 1557 comprise FAG flake graphite cast iron housings with a concave bore in which FAG radial insert ball bearings are fitted. These units are matched to each other and are available as plummer block housing units, flanged housing units and take-up housing units.

Radial insert ball bearings with a spherical outer ring, when fitted in housings with a concave bore, can compensate for static misalignment of the shaft.

Housing units are supplied with a loose packed lubrication nipple and integrated end cap for the lubrication nipple as well as an Allen key.

Spherical outer ring

# Radial insert ball bearings

**Features** These radial insert ball bearings are based on single row deep groove ball bearings 62 and comprise a solid section outer ring and an inner ring extended on both sides.

The bearings have plastic cages and are sealed on both sides by single piece seals RSR with a vulcanised seal lip and an outer flinger shield.

The honed raceways of the bearing rings, in conjunction with the high ball grade, ensure quiet running and a reduced frictional torque.

The outer ring has a spherical outside surface. In combination with a housing matched to the design, bearings with a spherical outer ring can compensate static misalignments of the shaft, see page 11.

The radial insert ball bearings are pregreased and can be relubricated by means of two lubrication holes in the outer ring.

**Inch size designs** The radial insert ball bearings are also available with inch size bore dimensions, see dimension table.

**Anti-corrosion protection** The inner and outer rings as well as the flinger shields of the radial insert ball bearings are provided with the black Durotect BS coating in order to offer basic protection against corrosion.

Adapter sleeves have a Durotect BS or phosphate coating.

**Location on shaft** Radial insert ball bearings are particularly easy to fit and are preferentially suitable for drawn shafts with the tolerances h6 © to h9 ©.

In the radial insert ball bearings UC, the inner ring is located on the shaft by means of two grub screws offset by 120°, *Figure 1*, page 10. They are suitable for bearing arrangements with a constant direction of rotation or, under low speed and load, for an alternating direction of rotation.

The grub screws are self-retaining and have a fine pitch thread with cup point for secure location of the bearings. In order to allow better differentiation, the metric grub screws have a Durotect BS coating while the inch size grub screws are zinc plated.

In the case of radial insert ball bearings UK, the inner ring is located on the shaft by means of a concentric adapter sleeve in accordance with JIS B 1552, *Figure 2*, page 10. The roughness of the adapter sleeve on the inside and outside is Ra 2,5. They are suitable for bearing arrangements with an alternating direction of rotation, even under high speed and load.

## Tightening torques

Tightening torques for metric and inch size grub screws, see table, page 34.  
Tightening torques for locknuts, see table, page 35.

## Sealing

FAG Black Series radial insert ball bearings are supplied with seals RSR, see table.

## Seal types

Seal RSR	
	<p>0001811A</p> <p>Single piece, zinc plated sheet steel washer with vulcanised and radially preloaded seal lip made from NBR and additional flinger shield</p>

## Operating temperature

The insert bearings are suitable for operating temperatures of  $-20\text{ }^{\circ}\text{C}$  to  $+100\text{ }^{\circ}\text{C}$ . Temperature peaks of up to  $+120\text{ }^{\circ}\text{C}$  are possible for short periods.

In the case of temperatures over  $\vartheta = +100\text{ }^{\circ}\text{C}$ , relubrication must be carried out regularly.

## Design and safety guidelines

### Compensation of static misalignments

Bearings with a spherical outer ring, fitted in housings with a concave bore, can compensate for static misalignment of the shaft, *Figure 3*:

For units with a lubrication groove in the housing and a lubrication hole in the radial insert ball bearing, the following applies:

- Up to  $\pm 2,5^\circ$ , the units can be relubricated.
- Between  $\pm 2,5^\circ$  and  $\pm 5^\circ$ , the facility for relubrication is dependent on the specific unit. Please contact us in this case.
- Above  $\pm 5^\circ$ , relubrication is no longer possible.

The units must not be used to support swivelling or tumbling motion.

*Figure 3*  
Compensation of static shaft misalignment

### Minimum radial load

In order to ensure slippage-free operation, the bearings must be subjected to a minimum radial load. This applies particularly in the case of high speeds and high accelerations. In continuous operation, a minimum radial load of the order of  $P \cong 0,01 \cdot C_r$  is necessary for ball bearings with cage.

# Radial insert ball bearings

## Speed limits for radial insert ball bearings

The speed limits are dependent on the load, the clearance between the bearing bore and shaft and the friction of the seals in the case of bearings with contact seals.

Guide values for the permissible speeds can be derived from the diagram, *Figure 4*.

In the case of load ratios  $C_r/P > 13$ , the speeds can be increased. At  $C_r/P < 5$ , location by means of a fit is recommended, see section Conditions of rotation, chapter Technical principles, Catalogue HR 1, Rolling Bearings. For both types of applications, please contact us.

Example of permissible speed calculation

Example

Given:

- Shaft tolerance h6  $\text{E}$
- Radial insert ball bearing UC206
- Basic dynamic load rating  $C_r$  20 700 N
- Load P 1 300 N
- Sealing Seals RSR.

Required:

- Load ratio  $C_r/P = 20\,700\text{ N}/1\,300\text{ N}$   $C_r/P > 13$
- Permissible speed  $n \approx 4\,300\text{ min}^{-1}$ , *Figure 4*.

n = permissible speed  
h5, h6, h9 = shaft tolerance (this is subject to the envelope requirement  $\text{E}$ )  
 $C_r/P$  = load ratio

① Ball set (bearings of sizes 201, 202, 203 and 204 all have the ball set 204)

*Figure 4*  
Permissible speeds for radial insert ball bearings with seals RSR

### Shaft tolerances for radial insert ball bearings

The permissible shaft tolerance is dependent on the speed and load. Tolerances h6 © to h9 © are recommended.

Conventional drawn shafts will suffice for most applications.

### Accuracy Standard tolerances of radial insert ball bearings

The outside diameter tolerances of the bearings conform to the tolerances in accordance with JIS B 1558. The inner ring bore has a plus tolerance to allow easier mounting of the bearing, see tables.

#### Inner ring tolerances

Nominal bearing bore diameter d mm		Variation <sup>1)</sup> $\Delta_{dmp}$ $\mu\text{m}$		Width deviation $\Delta_{Bs}$ $\mu\text{m}$	
over	incl.	min.	max.	min.	max.
10	18	0	+15	-120	0
18	31,75	0	+18	-120	0
31,75	50,8	0	+21	-120	0
50,8	80,962	0	+24	-150	0
80,962	120	0	+28	-200	0

<sup>1)</sup> This corresponds to the arithmetic mean value derived from the largest and smallest diameters (measured using a two-point measuring device).

#### Outer ring tolerances

Nominal outside diameter $D_{sp}$ mm		Variation <sup>1)</sup> $\Delta_{Dm}$ $\mu\text{m}$	
over	incl.	min.	max.
30	50	-11	0
50	80	-13	0
80	120	-15	0
120	150	-18	0
150	180	-25	0
180	250	-30	0

<sup>1)</sup> In the case of sealed bearings, the largest and smallest values of the outside diameter can deviate from the mean value by approx. 0,03 mm.

# Radial insert ball bearings

## Radial internal clearance of radial insert ball bearings

The radial internal clearance in accordance with JIS B 1520 is C3 for radial insert ball bearings UC and C4 for radial insert ball bearings UK. It is thus larger than in the case of normal deep groove ball bearings, see table.

The larger internal clearance allows better support of misalignments and shaft deflection.

### Radial internal clearance

**Take-up housing units**  
Flake graphite cast iron housing

# Housing units

**Features** These housing units are available as plummer block housing units, flanged housing units and take-up housing units. The units are ready-to-fit and comprise FAG flake graphite cast iron housings in which FAG Black Series radial insert ball bearings are fitted.

Due to the spherical outer ring of the bearing and the concave housing bore, housing units can compensate for static misalignments of the shaft, see page 31.

The housings are screw mounted on the adjacent construction. Less stringent tolerances are sufficient for the screw mounting surfaces, see page 31.

## Housing units with flake graphite cast iron housing

The flake graphite cast iron housings are single piece components in accordance with JIS B 1559 and have high radial and axial load carrying capacity, see page 31.

The housing has a lubrication groove for relubrication of the radial insert ball bearing. The housing has a lubrication hole with an M6 thread for a lubrication nipple.

The housings have a primer paint coating as anti-corrosion protection of colour RAL 9005 (black).

In order to ensure function and reliability under all operating conditions, the bearings and housings are matched to each other with a defined swivel moment after mounting.

All catalogue cast iron units have a mean swivel moment (as standard); further designs with a smaller or greater swivel moment, depending on their application, are available by agreement.

## Housing material

The material used for the flake graphite cast iron housings is cast iron in accordance with JIS G 5501.

## Plummer block housing units

Plummer block housing units have a housing with a short or long base and are screw mounted to the adjacent construction through slot holes or fixing holes, *Figure 1* and *Figure 2*, page 29.

Plummer block housing units with a long base are available either with radial insert ball bearings UC with grub screws or with radial insert ball bearings UK with adapter sleeves, see dimension table.

UCP

*Figure 1*  
Plummer block housing unit,  
flake graphite cast iron housing  
with long base

**UCPA**

*Figure 2*  
Plummer block housing unit  
with short base

**Flanged housing units**

Flanged housing units are available as two-bolt and four-bolt units, *Figure 3* to *Figure 5*, page 30. The housings are oval, square or round in shape. The housings have through holes for location purposes.

Flanged housing units are available either with radial insert ball bearings UC with grub screws or with radial insert ball bearings UK with adapter sleeves, see dimension table.

**UCFL**

*Figure 3*  
Two-bolt flanged housing unit,  
oval version

**UCF**

*Figure 4*  
Four-bolt flanged housing unit,  
square version

## Housing units

**UCFC**

*Figure 5*  
Four-bolt flanged housing unit,  
round version

**Take-up housing units**

Take-up housing units can be moved or swivelled, *Figure 6* and *Figure 7*. They are used where shafts must carry out long displacement motions.

**UCT**

*Figure 6*  
Take-up housing unit  
for linear motion

**UCFA**

*Figure 7*  
Take-up housing unit  
for swivel motion

**Operating temperature**

Housing units are suitable for operating temperatures of  $-20\text{ }^{\circ}\text{C}$  to  $+100\text{ }^{\circ}\text{C}$ . Temperature peaks of up to  $+120\text{ }^{\circ}\text{C}$  are possible for short periods.

## **Design and safety guidelines**

### **Compensation of static misalignments**

Units with a spherical outer ring and concave housing bore can compensate static misalignments of the shaft, see page 11.

### **Load carrying capacity of housings**

Due to their versatile characteristics, FAG housing units can be easily used in almost all industrial sectors.

### **Radial load carrying capacity**

Flake graphite cast iron housings can support the same radial loads as the radial insert ball bearings fitted. The static load carrying capacity  $C_{0r}$  of the radial insert ball bearings is stated in the dimension tables.

Where shock loads are present, appropriate safety factors must be applied. In this case, please contact us.

### **Axial load carrying capacity**

The axial load carrying capacity of flake graphite cast iron housings is restricted to  $0,5 \times C_{0r}$ .

### **Load carrying capacity and speed limits of radial insert ball bearings**

In the design of housing units, attention must be paid to the load carrying capacity and speed limits of the radial insert ball bearings fitted:

- speed limits, see page 12
- dimension table, see page 16.

### **Design of adjacent construction**

The permissible shaft tolerance is dependent on the speed and load. Shafts of the tolerance classes h6  $\oplus$  to h9  $\oplus$  can be used.

### **Screw mounting surfaces**

Recommendations for the screw mounting surfaces are as follows:

- roughness of the screw mounting surface max. Ra 12,5 (Rzmax 63)
- geometrical and positional tolerance 0,04/100 concave, spherical not permissible.
- In the event of high loads occurring parallel to the mounting surface of plummer block housing units (in the case of cast iron housing with long base), the use of additional dowel pins to DIN EN ISO 8752 is recommended. In this case, through holes (see centre punch mark for housing ASE) must be applied, see *Figure 8*, page 33.

# Housing units

<b>Fixing screws</b>	<p>The screw connection should be designed in accordance with the state of the art; friction coefficient <math>\mu = 0,12</math> (90%).</p> <p>Screws of grade 8.8 or better can be used for fixing. The maximum tightening torques applicable to this screw grade must not be exceeded even if screws of a higher grade are used.</p> <p>In principle, we recommend that the screw connection should only be tightened to 70% of the values stated in the standard.</p> <p>For fixing, hexagonal socket head screws in accordance with DIN EN ISO 4762 or hexagonal socket head screws with a coarse pitch full thread in accordance with DIN EN ISO 4017 should be used. The screws should be combined as a minimum with a washer in accordance with DIN EN ISO 7089 or DIN EN ISO 7090.</p> <p>Screws and accessories for location are not included in the delivery.</p>
<b>Mounting and dismounting</b>	<p>Radial insert ball bearings must be handled with care before and during mounting. Their trouble-free operation is also dependent on the care taken during mounting.</p>
<b>Delivered condition</b>	<p>The housings have a coating of black primer paint (RAL 9005).</p> <p>The radial insert ball bearings are greased using a grease in grease group GA13, see Catalogue HR 1, Rolling Bearings.</p> <p>The housing units are supplied with a loose packed lubrication nipple and integrated end cap for the lubrication nipple as well as an Allen key.</p>
<b>Storage and shelf life</b>	<p>The units should be stored in dry, clean rooms with a temperature as constant as possible and at a relative humidity of max. 65%.</p> <p>The storage life of radial insert ball bearings is limited by the shelf life of the grease, see chapter Technical principles in Catalogue HR 1, Rolling Bearings.</p>
<b>Removal from packaging</b>	<p>Perspiration causes corrosion. Hands must therefore be kept clean and dry. Bearings should not be removed from their original packaging until immediately before mounting.</p>
<b>Preparation for mounting</b>	<p>The following preparatory measures for mounting should be taken:</p> <ul style="list-style-type: none"><li>■ Ensure that the mounting tools and fixing screws are present.</li><li>■ Clean the shaft and remove any burrs.</li><li>■ Inspect the bearing seating surfaces on the shaft.</li><li>■ Keep bearing seating surfaces clean, dry and free of grease.</li></ul>

## Mounting of plummer block and flanged housing units

The assembly area should be as dry and clean as possible:

- The specified shaft tolerances must be observed, see page 31.
- Mounting forces must never be directed through the rolling elements.
- Blows should never be applied directly to the bearing rings and flinger shields or seals.
- Observe the tightening torques  $M_A$  for grub screws and adapter sleeve, see tables, page 34.

If the following sequence is observed, the bearing will align itself on the shaft in such a way that no undesirable stresses occur:

- ▶ Slide the housing unit onto the shaft and align it with the fixing holes in the adjacent construction, *Figure 8*.
- ▶ Fit dowel pins if necessary.
- ▶ Tighten the fixing screws for all housings finger tight in the adjacent construction as far as possible and align the shaft, *Figure 9*, page 34.
- ▶ Tighten both grub screws in the inner ring (for radial insert ball bearing UC) or the locknut of the adapter sleeve (for radial insert ball bearing UK) using a tightening torque (with an additional adapter if necessary) to the specified tightening torque, *Figure 10*, page 34.
- ▶ Locate the housings on the adjacent construction using the recommended tightening torque, see page 31.

① Position of additional through hole for location of dowel pins in accordance with DIN EN ISO 8752 (in the event of high loads occurring parallel to the mounting surface; for housing P)

AN13	150
AN15	170
AN16	200
AN17	230
AN18	270

### Dismounting

The units are dismounted in the reverse sequence.

- ▶ Loosen the grub screws in the inner ring or the locknut of the adapter sleeve.
- ▶ Unscrew the housing.

### Accuracy

The flake graphite cast iron housings conform to JIS B 1559.

Accuracy of fitted radial insert ball bearings: see page 13.

### Dimensional tolerances

The dimensional tolerances for the machined surfaces of the flake graphite cast iron housings are  $\pm 0,25$  mm.

Dimensions without tolerance conform to JIS B 0403:

- unfinished dimensions to Table 1, class CT 10
- finished dimensions to Table 5.
