

Product Information:

MEG ANTIFREEZE

2 YEAR ANTIFREEZE AND RADIATOR COOLANT (Formerly Universal Antifreeze)

Description

MEG Anti-freeze will protect engines from frost damage right down to -36°C , whilst providing outstanding protection against rust and corrosion for all parts of the cooling system. This mono-ethylene glycol (MEG) based antifreeze, which meets the technical requirements of BS6580:2010, is also recommended for all year round use.

Features

- Does not allow rust or corrosion to take place with cast iron, aluminium, copper alloys, solder, or any other metals found in the engine cooling system and therefore prolongs the life of the block, cylinder liners, radiator, pump and heater system.
- Does not form sediment, precipitate additives or form gels.
- No adverse effects on rubber hoses or gasket materials and will not cause leaks.
- Last for up to two years in service, when a 50% solution is maintained.
- Does not form harmful foam inside the system.
- Compatible with all good quality ethylene glycol antifreezes of this type.
- Nitrite, amine and phosphate (NAP) free.

Applications

Suitable for most engine cooling systems found in cars, vans, trucks, agricultural equipment and contractors plant.

NOTE: Always check the manufacturer's handbook or seek technical advice in case an alternative antifreeze type is required.

Performance

Exceeds the requirements of many European and International Standards including: ASTM D3306, SAE J 1034, BS 6580 (2010).

Solution % Vol.	Freezing Point $^{\circ}\text{C}$	SG Reading
25	-12	1.030
33	-22	1.045
40	-27	1.060
50	-36	1.074

Physical Characteristics

Appearance	Blue
Relative Density @ 15°C	1.119
Equilibrium Reflux Boiling Point ($^{\circ}\text{C}$)	161
pH @ 25°C (50% vol)	7.8
Water Content (%)	7.5 max
Reserve Alkalinity, 0.1N HCl	20.5

Figures based on average production values

Part No.s: ANT001, ANT005, ANT020, ANT205

(TDS MEG Antifreeze – 090316 Issue 9)
